### FACTORY AUTOMATION

# MITSUBISHI ELECTRIC INDUSTRIAL ROBOT FR Series

# GLOBAL IMPACT OF MITSUBISHI ELECTRIC

Through Mitsubishi Electric's vision, "Changes for the Better" are possible for a brighter future.

#### Changes for the Better

We bring together the best minds to create the best technologies. At Mitsubishi Electric, we understand that technology is the driving force of change in our lives. By bringing greater comfort to daily life, maximizing the efficiency of businesses and keeping things running across society, we integrate technology and innovation to bring changes for the better. Mitsubishi Electric is involved in many areas including the following

#### **Energy and Electric Systems**

A wide range of power and electrical products from generators to large-scale displays.

#### **Electronic Devices**

A wide portfolio of cutting-edge semiconductor devices for systems and products.

#### **Home Appliance**

Dependable consumer products like air conditioners and home entertainment systems.

#### Information and Communication Systems

Commercial and consumer-centric equipment, products and systems.

#### **Industrial Automation Systems**

Maximizing productivity and efficiency with cutting-edge automation technology.

# **OVERVIEW**

# The new future of automation made by next-generation intelligent robots

Providing improvements in productivity, quality, environmental protection, safety and security to help reduce companies' TCO\* and boost their corporate value

We offer solutions that use FA technology and IT to reduce total costs in everything from development through to production and maintenance, supporting customers to continuously improve their business operations and achieve truly cutting-edge manufacturing.

\*TCO: Total Cost of Ownership e-F@ctory is Mitsubishi Electric's trademark and registrated trademark.

#### Seeing: Improvement

IT systems feed the results of analysis back into the production site

IT systems

#### **Observing: Analysis**

Primary processing of data collected using FA (edge computing) Seamless integration with IT systems

Edge computing

Watching: Visibility Collecting production site data in real time

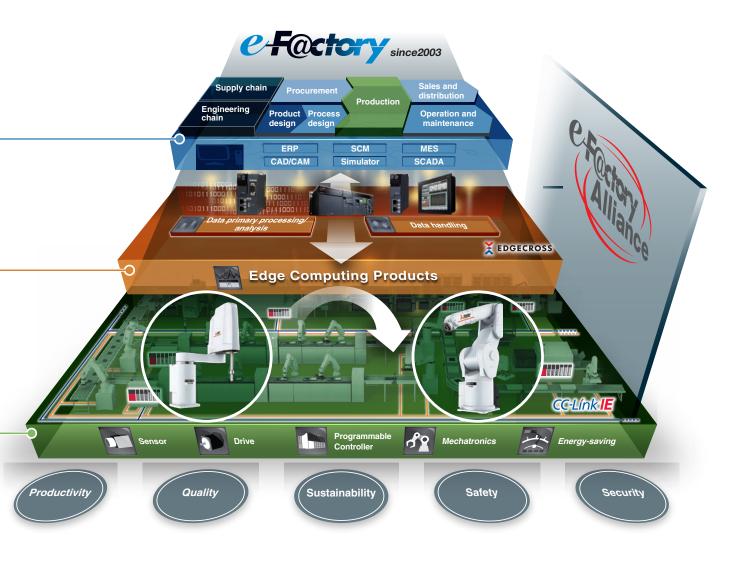

**Production site** 

Helping to increase corporate value through "Visibility<sup>3</sup> (cubed) – seeing, observing, watching" and "Usability"

Introducing the next generation of intelligent robots, incorporating advanced solutions technology and "e-F@ctory", technologies and concepts developed and proven using Mitsubishi Electric's own production facilities that go beyond basic robotic performance to find ways of reducing the TCO in everything from planning and design through to operation and maintenance.

## possible and e-F@ctory

High mix production

### Evolved intelligence realizes advances in work procedures, cooperation between people and robots, and e-F@ctory-compatibility, making next-generation manufacturing a reality.

With globalization and increasingly diverse consumer needs in the market, the manufacturing industries face a time of considerable change. It is no longer enough for industrial robots to simply perform a single task. Industry now demands robots with the capacity and flexibility to readily take on more sophisticated tasks. The MELFA FR series provides new, more intelligent solutions that underpin "next-generation manufacturing", offering a simpler approach to advanced and flexible production. These robots can handle all your automation needs.

#### **MELFA FR Series**

"Next-generation intelligent functions" make it simple to carry out work that has always defied automation. "Safe, collaborative work applications" allow robots and people to work together with high levels of safety. "FA-IT integration functions" support next-generation manufacturing. With these 3 key features, the FR Series is capable of handling virtually all your automation needs.

MELFA

**Smart Plus** Function expansion options further broaden the range of possibilities of the MELFA FR series, offering performance beyond your expectations.

**Integration with the MELSEC iQ-R series PLCs enables more advanced tasks!** Integrating these robots with the Mitsubishi Electric MELSEC iQ-R PLCs simplifies startup and improves productivity and maintainability, ensuring that you maximize the potential of the FR series.

### Vertical, multiple-joint type robots

- Optimized arm length and 6 joints for a broader range of movement support complex assembly and process operations.
- Compact body and slender arms capable of covering a large work area and large load capacity.
  Suitable for a broad range of layouts, from transporting machine parts to assembling electrical components.
  Designed to withstand environmental conditions, making it ideal for a wide range of applications without having to worry about the installation environment.

#### ■ Vertical, multiple-joint type (RV) series

|                          | See.   |         | -      | Š       |        | Ś       |          | æ       | 3        |         |

### Horizontal, multiple-joint type robots

•With a wealth of operating areas and variations, it is the perfect fit for a variety of applications.

Highly rigid arms and cutting-edge serve controls provide superb precision and speed.
 Ideal for a wide range of fields, from high-volume production of foodstuffs and pharmaceuticals that demands fast operation, through to assembly work where high levels of precision are required.

8

#### **Controller Types**

**D**TYPE Controller

A standalone controller similar to existing models. Enables the construction of cells using robot controllers as the control nucleus. Comes with various interfaces as standard, allowing customers to build a system optimized for their applications.

Robot controller

9

#### Improved controller performance

Control cycles on FR series controllers take just half the current time, improving robot control performance. The faster calculation speed gives better robot processing capacity and shorter cycle times for improved productivity. Integration with the various sensors also makes precision operation possible. (The performance of FR series Q type controller is equivalent to F series Q type controller.)

The R Type controllers supported by the MELSEC iQ-R series dramatically improve compatibility with FA equipment, allowing information to be shared mutually and data to be collected and processed. Improved system bus performance has also reduced communication cycles to 1/4 of current levels, allowing shorter cycle times for production facilities.

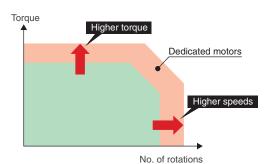

Data exchange cycle among multi-CPUs 888us

#### Dedicated motors for high-speed operation

**Basic** performance

Using motors developed in-house, highly rigid arms and our original drive control technology, these machines are capable of high-torque output at high rotation speeds, giving better operating performance. Their capacity for continuous operation is also improved, with higher productivity due to the shorter cycle times.

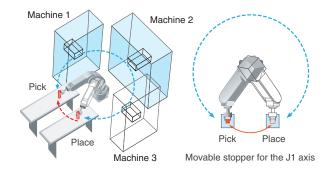

**MELSEC iQ-R series** 

Data exchange cycle among multi-CPUs 222us

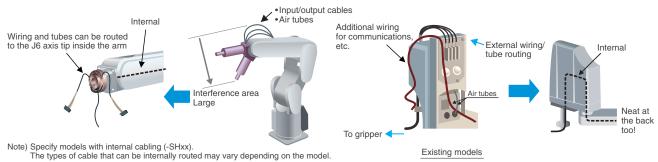

#### Expanded pivotal operating range

Improved flexibility for robot layout design considerations. Enabling more effective use of access space around the entire perimeter including to the rear. Shortened movement distances, enabling cycle times to be shortened.

**Preventing cable interference** 

Internal wiring channels provided in the tip axis. Allows wiring and tubes to be routed internally up to the gripper mount. By routing the body cables internally, areas where body cables might interfere with peripheral equipment can be minimized and the problem of wiring and tube tangles can be eliminated.

### Greater advances in intelligent technology

Enhanced cooperation with vision sensors and more advanced force sensors allow more advanced tasks to be accomplished at higher speeds and with greater precision.

Through the use of highly accurate vision sensors and force sensors that control the levels of force applied by robots, it is now possible to automate extremely difficult tasks that have been beyond the scope of automation in the past.

#### Force sensor

- Checks the applied force and the force status
- during insertion to provide improved work quality • Assembly of difficult-to-fit workpieces
- Teaching assistance using force information
- Faster control cycles for improved force control

#### 3D vision sensor

- Kitting or sorting of irregularly placed or overlapping workpieces
- Supports functions for easier startup

#### **Preventing interference**

#### iQ Platform

Checking for interference between the arms and grippers of adjacent robots prevents any contact.

#### 2D vision sensor

- Setup tools for vision simplify the calibration of robots and cameras
- Simple Ethernet connections between robots and cameras
- Easy control using vision control instructions in the robot programs

#### **Cooperative control**

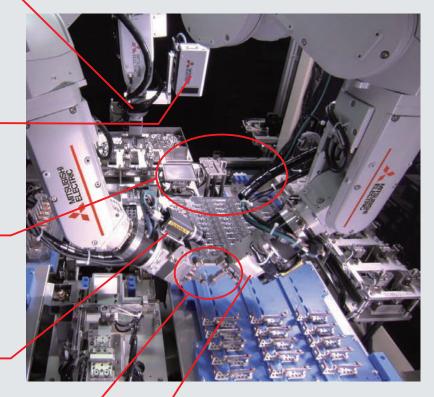

#### iQ Platform

- Two robots can be coordinated to transport very long or heavy objects
- Positional relationships of non-fixed parts maintained during transportation and assembly

#### **Multi-function gripper**

- Multi-function electric grippers capable of working with different part types of varying sizes
- •Less need for setup changes

#### Example of intelligent technology use

#### Tracking

Transport, alignment, and assembly work, etc. can be performed while robots are tracked with the workpiece on the conveyor without stopping the conveyor

### Tracking accuracy enhancement function

Positional gain is changed in real time for even better tracking accuracy

#### Other functions

Singular point transit and orthogonal compliance functions facilitate the completion of a range of different tasks.

**CR800 Controller** 

MELFA Smart Plus

card

(2F-DQ5XX)

<u>h (1244</u>)

MELFA Smart Plus supports cell production, using robots to overcome the limitations on lead times, production volumes and location.

#### MELFA Smart Plus

Advanced intelligent functions are provided in the form of a function expansion option card. This provides leading-edge functions for all phases of customer's operations, from design and startup through to operation and maintenance. The functions provided include integration functions for the various sensors and autonomous startup adjustment functions.

\*Activated with the insertion of a Smart Plus card.

The high-precision technologies and calibration functions provided by MELFA Smart Plus allow correction of machine deviations between cells, offline teaching and copy cells<sup>\*1</sup>. This then enables coordinated operation between the master cell and other cells.

\*1 Offline teaching: Operation where programs created in a simulation are transferred to an actual cell.

Copy cell: Conveys master cell modification information. Processes in cells in other locations are then modified in the same way.

NEW

NEW

#### MELFA Smart Plus

**Robot mechanism temperature** compensation function

Improves positioning accuracy by compensating for thermal expansion in the robot arm

#### Calibration assistance function

#### Automatic calibration

Improves positioning accuracy by automatically correcting the vision sensor coordinates

#### Workpiece coordinate calibration

Improves positioning accuracy by automatically correcting the robot coordinates and workpiece coordinates from the vision sensor

#### Inter-robot relational calibration

Uses vision sensors to automatically adjust the robot location relative to other robots. Improves positioning accuracy during coordinated operation

#### **3D vision AI**

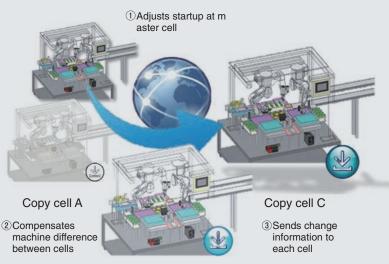

Shortens startup time by using original AI technology to automatically adjust parameters

**Preventive maintenance** 

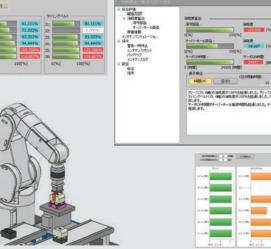

Maintains the robot's health with operation status tracking

#### **Coordinated control for** additional axes

Integrates the robot and traveler for machining or assembly at a specified speed

Copy cell B

#### Preventive Maintenance screen (RT ToolBox3)

### Greater advances in intelligent technology

Insertion by copy control in the X-Y direction

Operation change

Phase detection

Phase-matched assembly

Complex assembly tasks achieved through techniques

#### **Force sensor**

**Force detection** 

Switches operation in response to

Force control applied in the Z direction +

rotation

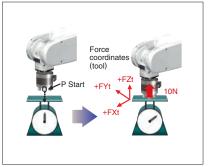

transitional states.

such as phase matching

Monitors the force applied to the robot gripper so that copying and fitting work can be carried out as it would by a human operator.

#### **Force control**

Controls "force" and "flexibility". Modifies control properties during operation.

Keeps the force constant so that the workpiece can be handled without causing damage

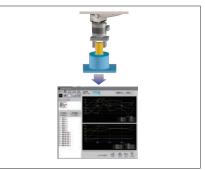

#### More accurate force sensor

Advances in force sensors allow faster and more accurate testing.

See P.67 for detailed specifications

#### Force log

Checks the work status. Saves log data.

Checks the work status to facilitate adjustment. Log data analysis also allows predictive safety measures

#### Gravitational offset cancellation

Compensates for gravity in response to changes in force on the force sensor in the X, Y and Z directions when the attitude changes. Force control can be exercised correctly

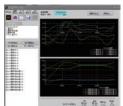

even when the attitude changes.

#### Teaching work assistance

#### Force GUI included \*1

- Computer software (RT ToolBox3) and a teaching box (R56TB or R32TB) are standard features of the force GUI screen, making it easy to use force sensors.
- Teaching can be carried out while monitoring the reactive force on the force GUI screen.
- \*1 GUI: Graphical User Interface

■Force log (RT ToolBox3 log viewer)

•Force data synchronized to the positional data can be saved as log data.

- Log data can be viewed as graphs using RT ToolBox.
- Log data files can be downloaded to a computer via FTP.

R32TB

R56TB

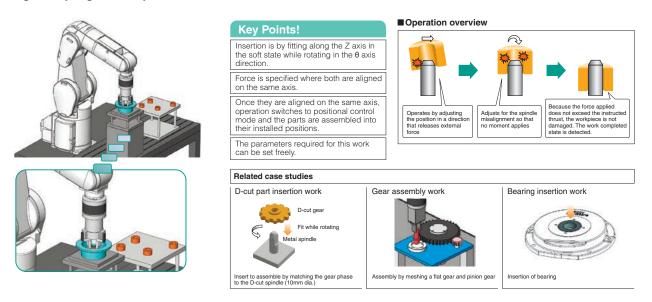

Teaching while monitoring force states using the dedicated force control screen in the teaching box. Enables optimized location teaching

13

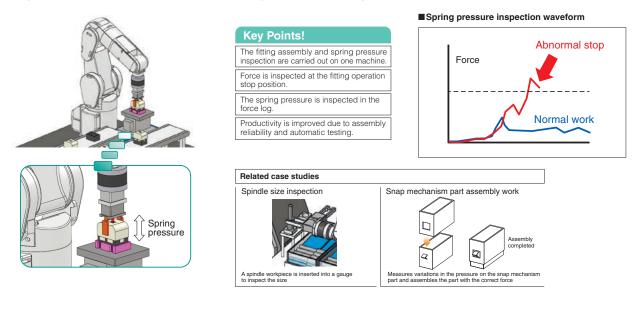

#### Assembly work (case study)

Fitting a coupling onto a spindle (insertion task with H7h7 tolerance)

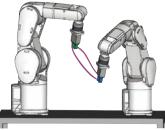

#### Force inspection (case study)

Fitting of a part where the force must be managed and the spring pressure inspected

#### Transportation (case study)

Belt transportation and installation on a pulley

#### Key Points!

The belt is transported using force control and coordinated work

Quality is assured without applying load to the workpiece Suitable for work to install belts on pulleys using force detection.

#### Deburring and polishing (case study)

#### Deburring work on machines and plastic parts

Force detection and force control are used to deburn curved surfaces on mold parts

Achieves smooth machining without causing unevenness in the part's machined surfaces.

### Greater advances in intelligent technology

#### **3D vision sensor**

NFW

NEW

#### **Enables bulk feeding**

Because the sensors allow bulk feeding without the use of special trays or parts feeders, it reduces the amount of part feeding work.

#### High-speed picking using original technology NEW

Shortens the image recognition time with high-speed recognition technology. (28% increase compared to Mitsubishi conventional model) Either the model-less recognition, which enables high-speed picking, or the model-matching recognition method, which accurately matches the workpiece position and attitude, can be selected to suit the application.

#### Recognition parameter automatic adjustment AI Smart Plus

Mitsubishi's original AI technology and simulation technology automate the sensor parameter adjustment work, which requires expertise knowledge. Anyone can easily achieve the same performance as a skilled worker in a short time. (Compatible only with model-less recognition)

#### Lightweight and compact for diverse installation

Compact and lightweight sensor section enables installation on robot hand. Both eye-in-hand and fixed installation applications are supported. The work distance and range of view can be changed flexibly by using the enclosed base set or extended option vision.

#### Adjustment assistance function

Features functions to compensate for lens distortion and for the aperture size and focusing during focus and aperture adjustment. This makes adjustment easier.

#### Workpiece supply assistance function

Spindle characteristic mode and attitude output mode can be used to ensure a stable grip during model-less recognition. The function to estimate the remaining bulk workpiece level allows the operator to understand the timing to load supplied parts.

#### Basic performance improved

Bulk parts supply

See P.68 for detailed specifications

Model-less recognition Model-m

Model-matching recognition

The grip position recognition speed has been greatly improved by reviewing the operation process method and connecting with a high-performance PC (general-purpose IPC). High-speed picking is now possible.

### Recognition parameter setting AI function

Al automatically adjusts the optimum 3D sensor parameters (image processing parameters, grip position recognition parameters) in a virtual space. Adjustment of complicated parameters is simplified by using the 3D CAD data, even without the camera head. This greatly reduces the vision sensor parameter adjustment time.

#### Features

Al automatically adjusts parameters on PC
No need for expertise knowledge

Mitsubishi's unique AI technology uses large amounts of learning data generated in a virtual space to efficiently and automatically adjust the optimum parameters.

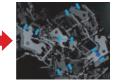

3D information on parts

MELFA

Smart Plus

Bulk parts supply state is repeated with physical simulation

3D sensor simulation repeats parts measurement and recognition

Al automatically adjusts sensor parameters

See P.71 for detailed specifications

#### Multi-function electric gripper

High-functioning operation control not possible using air cylinders

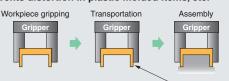

The gripping force and speed can be specified to suit the target, whether it's a heavy object or involves delicate work. Even when handling multiple workpieces of varying sizes, the operating positions can be specified so that the optimum stroke is configured. Product inspections can be informed by positional feedback from the gripper, such as whether gripping was successful or whether workpiece measurements indicate that it is acceptable.

<Benefits of the electric gripper>

Multi-point positional control (suited to many product models, adjustable open/close stroke)

Prevents distortion in plastic molded items, etc.

<Benefits of the electric gripper> Prevents distortion

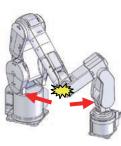

Speed control (retains workpiece shape, lessens impact force)
Gripping force control (prevents workpiece distortion)

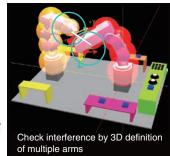

#### Interference prevention function

#### Automatically prevents collisions between robots

Unanticipated interference can be prevented during jogging or automatic operation because collisions between robots are detected in advance and robot movement is stopped.

#### Reduced workload during startup

The number of recovery processes following collisions due to missed interlocks or teaching errors can be reduced.

Multi-function electric gripper (TAIYO)

#### Simple control

The operation stroke and grip force can easily be configured for the workpiece shape using the robot programming.

#### Easy operation

The gripper can be freely controlled from the dedicated gripper screen in the teaching box.

#### **Cooperative control**

### iQ Platform

#### Cooperative control using multiple arms

Cooperative control between multiple robots is enabled through CPU connection between the robots. Normal operation is through individual robot operation, making operation simple.

Assembly work that maintains the relative positions for mutual gripping

#### **Coordinated transportation**

Long or flexible objects can be transported using multiple small robots instead of larger robots.

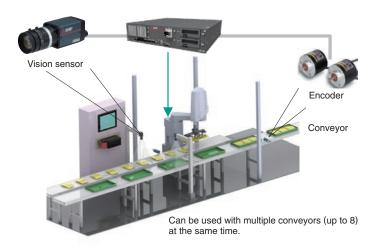

### Greater advances in intelligent technology

#### Tracking

- Transport, alignment, and installation work, etc. can be performed while a robot is tracking workpieces on the conveyor without stopping the conveyor.
- Different variations can be selected, including vision tracking in combination with a vision sensor, tracking in combination with an opto-electronic sensor, etc.
- Programs can be created easily in robot language (MELFA BASIC).

• Standard interface function. (Separate encoder and vision sensor required.)

- No need for a positioning device
- Reduce cycle time
- Reduce system costs

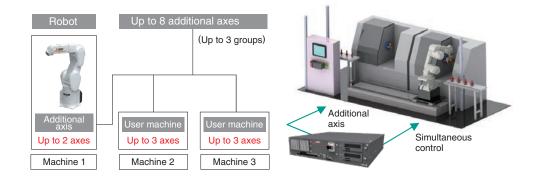

#### Additional axis function

- The layout can be set up to include the robot traveling axis and turntable as well as user machines separate from the robot such as loaders and positioning devices.
- Up to 8 additional axes can be controlled excluding the robot.
- Additional axes and user machines can be operated from the robot teaching pendant without any additional motion control hardware. The same JOG operation as for the robot can be used. Robot language can be used for control operations.
- •The robot controller has compatibility with the MELSERVO (MR-J4-B, MR-J3-BS) servos.
- Standard interface function

(Separate servo amplifier and servo motor required.)

• No need for a dedicated control device

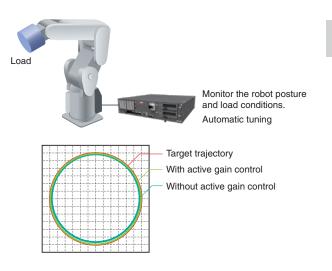

#### Improved accuracy

#### Active gain control

- Optimal motor control tuning set automatically based on robot operating position, posture, and load conditions.
- Improves tracking accuracy for the target trajectory.
- Active gain control is a control method that allows the position gain to be changed in real time.
  This is effective when traveling straight and sealing work requiring high
- accuracy.

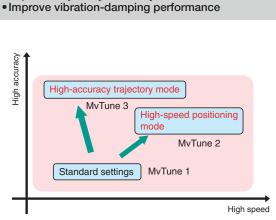

#### **Operating mode setting function**

Improve trajectory accuracy

- Trajectory priority mode/speed priority operation can be set in programs to match customer system requirements.
- Optimal motor control tuning set automatically based on robot operating position, posture, and load conditions.
  Improves tracking accuracy for the target trajectory.
- This is effective when traveling straight and sealing work requiring high accuracy.

2

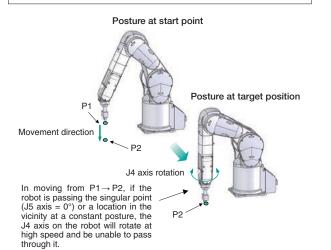

#### **Other functions**

#### Function for passing through the singular point

- The robot can be made to pass through the singular point. This allows for greater flexibility in the layout of robots and surrounding areas.
- Teaching operations can be performed more easily as there is no longer any need to cancel operations due to the presence of the singular point.

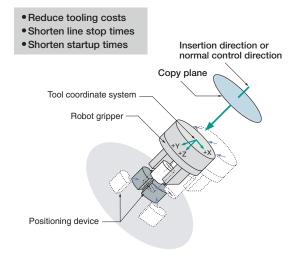

#### What a singular point is:

There is an unlimited number of angles at which the J4 and J6 axes can be set such that the angle of the J5 axis is 0° when linear interpolation operations are performed using position data from a joint coordinate system. This point is the singular point and is the point at which the robot cannot be operated at an assigned position and posture under normal conditions. The position at which this occurs is referred to as a singular point.

#### Orthogonal compliance control

- This function reduces the rigidity of the robot arm and tracks external forces. The robot itself is equipped with a compliance function, which makes special grippers and sensors unnecessary.
- This allows the amount of force generated through interference during chucking and workpiece insertion to be reduced and external movement copying forces to be controlled.
- The compliance direction can be set arbitrarily using the robot coordinate system, the tool coordinate system, etc.
- This is useful in protecting against workpiece interference and cutting down on stoppage.

### Greater advances in intelligent technology

#### Robot mechanism temperature compensation function

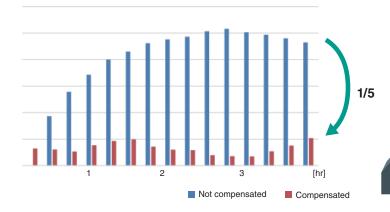

- Monitors the robot arm temperature and automatically compensates for deviations caused by thermal expansion in the arm.
- Positional errors due to thermal expansion in the arm when seasonal or time-period-related temperature changes arise are reduced to 1/5th\* of previous levels. (Under Mitsubishi Electric measurement conditions)

\*It may change depends on models and enviroment around the robot.

#### Range error relative to start position

Thermal expansion estimated and corrected

Smart Plus

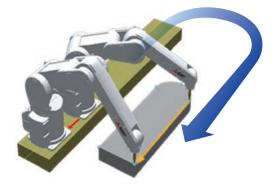

MELFA

#### Coordinated control for additional axes

- Allows synchronized operation where a robot is installed on an additional axis (linear axis) and its speed relative to the workpiece is specified.
- Supports machining of large workpieces using linear, circular or spline interpolation that exceeds the robot's range of movement.

Smart Plus

Linear interpolation

Workpiece movement by user mechanism

(move between workpiece coordinates)

Workpiece coordinates

- Allows synchronized operation where tracking of the robot and workpieces on an additional axis (linear axis) is specified.
- Linear or circular interpolation while the workpiece is being transported allows operations such as precision sealing workand surface inspections.

following workpiece coordinates Linear interpolation using workpiece coordinates (operation that traces the outside of the workpiece)

#### **Calibration assistance function**

#### Automatic calibration

Smart Plus

Commands for calibrating the robot and 2D vision are included. This automates the teaching work required for existing calibration and allows calibration to be conducted using robot programs. A function is also provided that uses screen deviation to compensate for vision sensor mounting error, ensuring more accurate calibration.

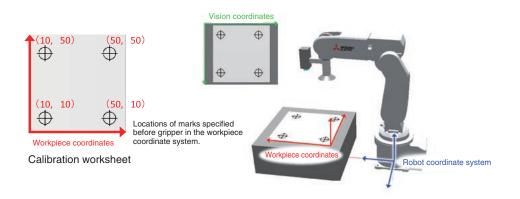

| (manual) | calibration |
|----------|-------------|
| 20       | 1           |
| ±0.2     | ±0.05       |
|          | 20          |

(Mitsubishi Electric measurements)

#### Workpiece coordinate calibration

Features 2D vision sensors mounted on the robot gripper and commands that calibrate work coordinates defined on the work palette, automating the teaching work required for existing calibration and allowing calibration to be conducted using robot programs. This simplifies tasks such the calibration of work palettes and robots installed on dollies or automated guided vehicles (AGVs).

#### Inter-robot relational calibration

Coordinated work can be simplified by running robot programs to calibrate workpiece coordinates that are shared among multiple robots fitted with 2D vision sensors on their grippers.

### **Preventive Maintenance**

#### **Preventive maintenance function**

#### NEW

### Smart Plus

#### **Maintenance simulation**

The maintenance component replacement timing and component overhaul maintenance timing are estimated. This estimated information can be used to review the maintenance cycle beforehand, and to verify operation to long-life of the robot.

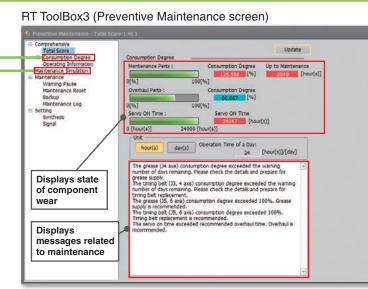

#### Consumption degree calculation function

The wear degree of drive components (grease, timing belt, reduction gears, ball screw/ball spline, bearings) is estimated from the robot operation status.

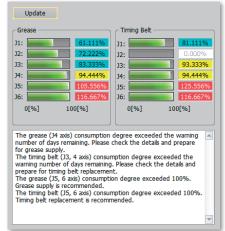

Efficient maintenance is supported by notifying the maintenance timing (with dedicated signal outputs, warning outputs), and by deciding the maintenance priority, etc.

#### Support for building maintenance system

Various maintenance data can be used in the robot program, and can be output to an IT system or GOT. Smart Plus helps build a maintenance system suitable for your system.

Details screen for calculating wear degree

The wear degree of maintenance components and overhaul components is color-coded, so components needing replacement can be quickly identified.

Maintenance Simulation Details screen

| Grade          | Tiring Bet   | Overhad    |
|----------------|--------------|------------|
| ntesheet)      | 31(13)(ref)  | n(4)peg    |
| tisalweefi     | n()          | 2(635++3   |
| Ciasheed       | 20162(ven)   | 33(63(mr)  |
| 4(43)mmD-      | 34(82)ve0    | >(436w)    |
| \$(43]weeD     | 29(A0DeaD    | (3)(4)D++D |
| n (x.3)jen() - | 38(4.5)mm()- | a (asparp  |

The maintenance timing can be predicted with pre-operation simulation.

21

#### Wear degree calculation function

Streamlined maintenance matching the usage conditions is supported by "visualizing" the component's wear degree.

#### Feature

#### See the wear degree of key components

Kinetic models and drive data are used to calculate the physical quantities (force, speed, etc.,) applied on the target components (grease, timing belt, reduction gears, ball screw/ball spline, bearings).

The wear degree of each component is calculated by comparing these quantities with the component's life expression.

### Receive notice on the appropriate maintenance timing

"Warnings" and "general-purpose signal outputs" can be issued at the maintenance timing.

#### ■ Maintenance simulation

Learn the robot maintenance timing before starting operations

#### Feature

### Maintenance timing is estimated based on the operation

The maintenance timing is calculated estimating that the designated motion (range designated in robot program) is repeated.

#### Review of robot-friendly motion is supported

The robot life can be estimated with offline simulations. Operations can be verified while changing the operation program, while taking the cycle and life into consideration.

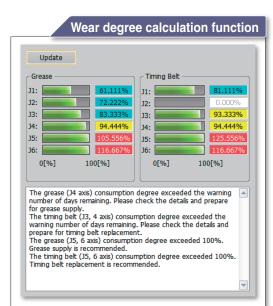

#### Coordination with host devices

Collectively manage the robot's maintenance data with a host system

#### Feature

#### Supporting a diverse maintenance system configuration

The maintenance information is held as status variables. This maintenance data can be used in the robot program, and can be retrieved from a host device using communication middleware.

### **Enhanced cooperation with FA products**

The seamless integration of machines enables flexible manufacturing tailored to the type of production. This improves productivity and maintainability and can reduce the TCO (Total Cost of Ownership).

#### iQ Platform

- Collaboration with MELSEC Q series/MELSEC iQ-R series realize more advanced work
- Shorter I/O processing times due to faster communication between CPUs
  PLC management allows large volumes of information
- to be sent to and from robots in real time
- Allows direct read/write operations to memory shared between robot CPUs

#### **CC-Link IE Field/SLMP**

Allows seamless data communication from production management down to the level of devices

#### **GOT** integration

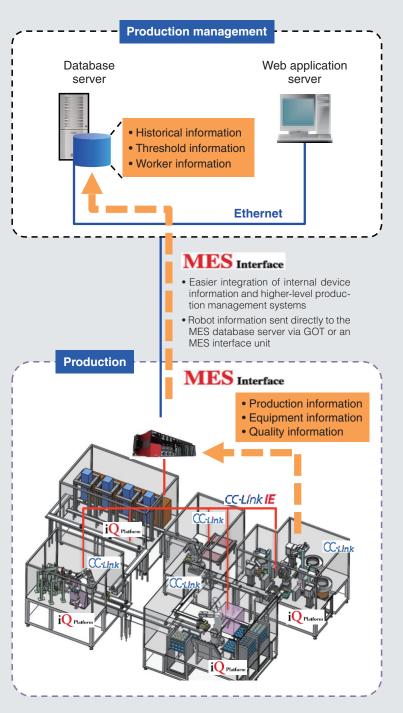

- Provides easy recipe management through checking of robot operations and information, data collection and setup switching
- Integrates production site operations with the GOT for improved operation and maintainability

#### Maintenance

Information before and after errors occur (state changes, I/O, external system variables, etc.) and program run states can be saved as log data, simplifying error identification.

### Easier robot information management

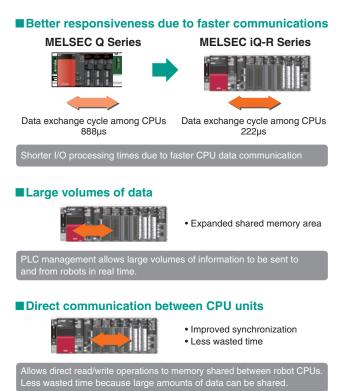

Data specific to robot mechanisms is recorded and saved inside the mechanisms, simplifying maintenance.

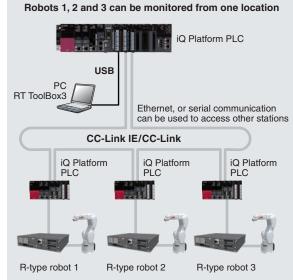

#### iQ Platform

Integration with the MELSEC iQ-R series PLCs enables more advanced tasks.

#### Batch management of multiple robots

Robots on the PLC network can be accessed from a computer connected to the main CPU. Allows shorter startup times for robots on the production line and improved maintenance.

#### **CC-Link IE Field/SLMP**

**SLMP SLMP** Serve TCP/UDP CC-Línk SLMP IP Seamless Message Protocol plus -Ethernet Seamless Ethernet information sharing PC PLC **SLMP** CC-Línk IE TCP/UDP CC-Línk IE Bield IP =11-11 Ethernet adapter PLC (master) Ethernet HUB CC-Link Ethernet GOT V/S PC reader Robot 🎫 Ethernet products of SLMP

#### Various network options

The various network options allow connection to a variety of devices.

Standard equipment: Ethernet USB SSCNET II Link IE Field Basic (Ver.A1d or later)

Compatible with CC-Link IE Field and SLMP.
Allows seamless data communication system-

wide, from the production management level

•Allows simple connection using just LAN

•Enables general-purpose Ethernet devices

to be used with robot programs.

compatible with SLMP (vision sensors, etc.)

Allows robot information (device information)

to be collected from higher level devices.

down to the device level.

cables

Option: CC-Link Profibus DeviceNet Network base card (CC-Link IE Filed EtherNet/IP, PROFINET)

### Enhanced cooperation with FA products

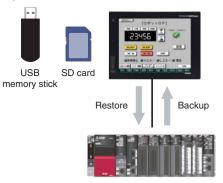

#### **GOT** integration

The GOT integration function makes it easy to use features such as recipe functions through setup switching, data collection and checking of robot operations and information. Production site HMIs can be integrated with GOT to help improve operation and maintainability.

#### GOT backup/restore functions

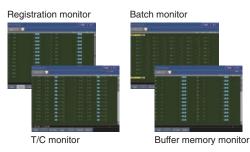

Data such as robot programs and parameters can be saved (backed up) onto the GOT SD card or USB memory stick using the GOT backup and restore function.

By backing up the GOT beforehand, operation can be restored with the GOT with no need for a personal computer (GT21 and higher). This greatly improves serviceability. The situation is saved even when an unexpected error occurs. This helps prevent data from being lost due to the empty battery or robot malfunction.

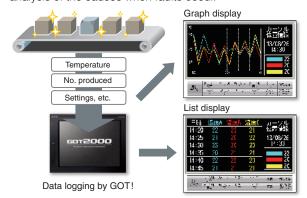

#### **Device monitoring function**

Allows the status of FA equipment such as PLCs, motion controllers, robot controllers and CNCs to be checked without a computer. Useful for tasks such as starting up devices.

#### Logging & graphs list

Uses GOT to collect and display data from equipment such as PLCs and robots. Data can be checked in readily understandable graphs and lists, allowing early identification and analysis of the causes when faults occur.

#### Shared memory expansion

Enhanced efficiency of monitoring and maintenance operations onsite using a single GOT (display device) as the Human Machine Interface (HMI).

#### Example of GOT display

Operation panel screen Jog/gripper operation screen

Current value and load factor monitor screen

Enables the robot to be controlled from the GOT even without a teaching box.

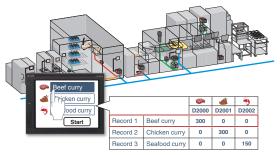

Current robot position data, error information, etc. can be displayed easily on the GOT.

#### Internal robot information

- · Error, variable, and program information
- Robot status (Current speed, current position, etc.)
- Maintenance information (Remaining battery capacity, grease life, etc.) Servo data (Load factor, current values, etc.)
- Sample image files can be downloaded from the Mitsubishi Electric FA website.
- Useful sample image files that can immediately be used in actual systems.
- Sample sequence programs (function blocks) are provided for using the sample image files
- Note) The sample image files are for the GT27 (640 × 480 or better). To use the files, GT Designer3 Version 1.178L or later is required.

#### **Recipe function**

This enables you to store data for each product in GOT and then write only the required data to a PLC, which simplifies the process of changing the setup for very varied manufacturing lines.

#### GOT connection (transparent function)

Programs and parameters can be edited from the USB interface on the front of the GOT using a transparent function for improved operability. (For GT21 or better)

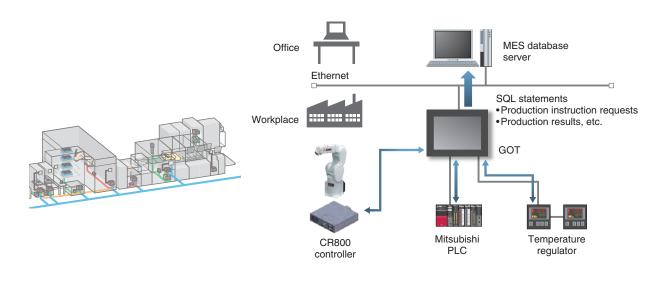

#### Support for the "e-F@ctory" FA integrated solution

Robot information can be sent to the MES database server using PLCs and MES interface units. The simple system construction allows you to obtain the robot production information (using the device allocation function).

Simple connection and integration of various types of FA devices (PLCs, GOT, servos, etc.).

The GOT MES interface function can be used to integrate various types of information from FA devices, including robots, thereby improving productivity and maintainability.

#### Maintenance (log function)

Robot information before and after an error occurs, and the program execution status can be automatically sent to the FTP server or saved on an SD card as log data. The operation log can also be retrieved, so causes of errors can be analyzed efficiently. (RT ToolBox3 is required.)

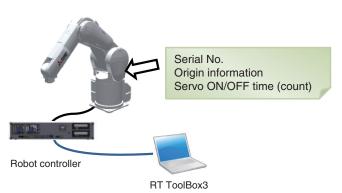

\*It works only on FR series D type (CR800-D)

#### Easier robot information management

Memory is included in the robot body and used to store robot-specific information. This makes it easy to switch robot controllers.

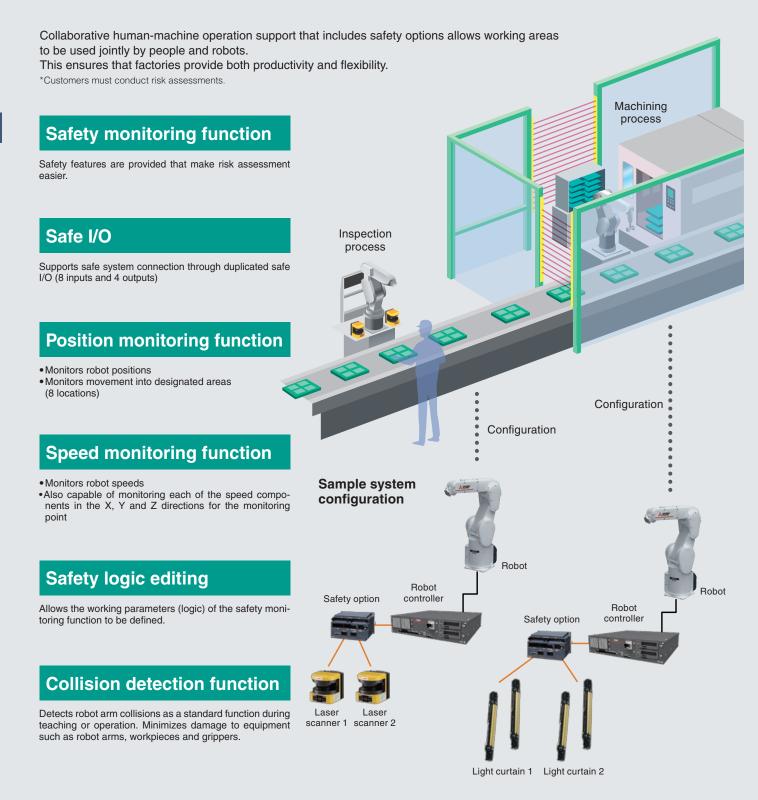

Information can also be collected without visiting the workplace, simplifying the formulation of maintenance plans.

# Improved safety through collaborative work applications

Safety functions ensure that automation is simpler, safer and more user-friendly.

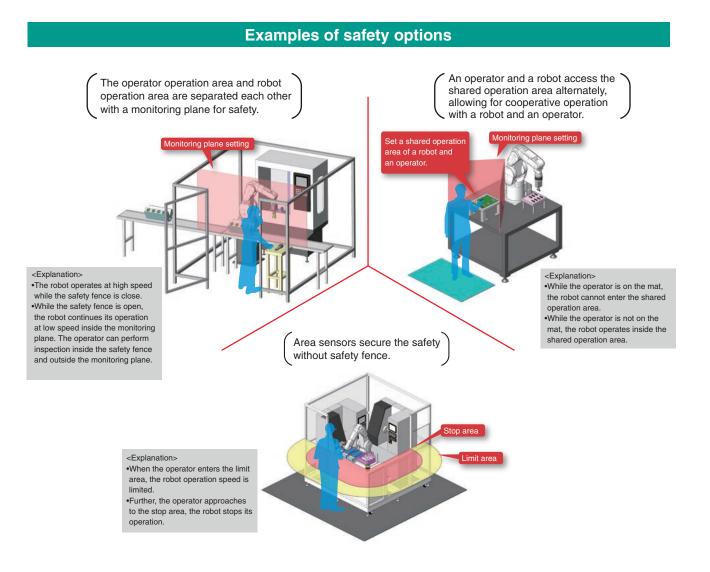

#### Safety option / Features

#### Operators can enter an operation area without stopping robots.

- High safety compliant with international standards
- Robot's automatic operation continues even with a safety fence opened.
   The safety input function enables safety doors to open without causing an emergency stop of the robot.
- Operators and robots share an operation area. = They can cooperate. While an operator is in a cooperative operation area, a robot does not approach the area. (Operation range limit function)
- Robots in cooperative operation keeps the safety speed. A robot in cooperative operation continues its operation at the safety speed to secure operator's safety.
- Robots can automatically shift to single operation from cooperative operation. Closing the safety door switches cooperative operation to single operation, and enables the robot to approach to the shared area.

\*Risk assessment and safety level proof need to be performed for the system. Please contact us if you require any further information.

#### Safety [Safe, collaborative work applications] A

### Improved safety through collaborative work applications

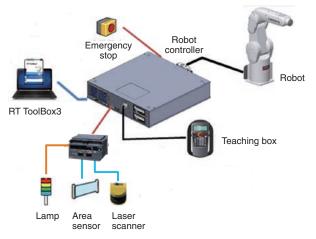

#### Safety monitoring function

Safety features compliant with the requirements of international standards are provided that make risk assessment easier.

| Safety feature | Details   | Comment                                 |  |
|----------------|---|---|--|
| STO function   | Electrically shuts off power to the motors in the robot body  | IEC 61800-5-2, category 4,<br>PLe, SIL3 | Supported as standard                                  |
| SLS function   | Monitors the TCP speed so that it does not exceed the monitoring speed.                                 | EN61800-5-2-compliant                   |  |
| SLP function   | Monitors a specified monitoring position so that it does not go beyond the position monitoring surface. | EN61800-5-2-compliant                   |  |
| SOS function   | Monitors the robot to ensure that it does not move from its stopped position                            | EN61800-5-2-compliant                   | Supported in<br>combination with<br>each safety option |
| SS1 function   | Function stopped by STO   | IEC 60204-1 stop category 1             |  |
| SS2 function   | Function stopped by the SOS   | IEC 60204-1 stop category 2             |  |

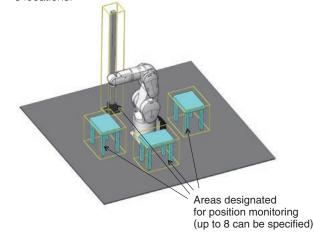

#### Safe I/O

Expands duplicated safe I/O to 8 inputs and 4 outputs. Allows the construction of various different safety systems.

#### Position monitoring function

- Monitors robot positions.
- Monitors movement into designated areas in up to 8 locations.

•Also allows monitoring of each of the X-, Y- and Z-direction

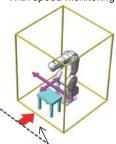

By setting a low monitoring speed in the system for directions in which the robot does not move, safe distances can be made

components for each monitoring point.

smaller to create compact cells safely.

#### Speed monitoring function

- Monitors robot speeds
- Monitors designated monitoring points on the the robot arm and gripper to ensure that they do not exceed the monitoring speed.
- Monitoring points: Monitoring points: Without speed monitoring With speed monitoring 4 locations on the robot arm 4 locations on the gripper Safety barrier Robot movement direction/speed

Low monitoring speed set for forward-backward robot movement → Small safe distance (more compact)

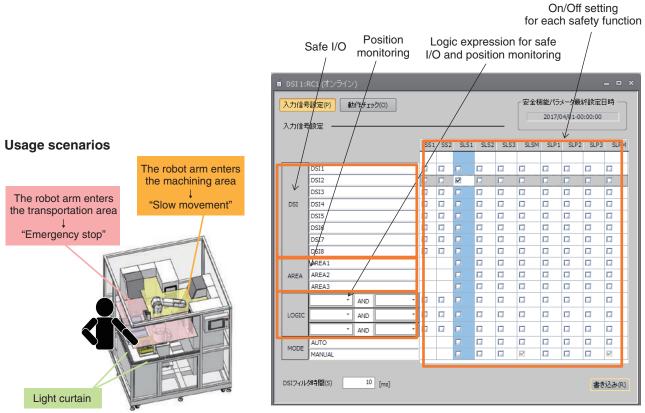

#### 29

#### Safety logic editing

The logic for each safe I/O can be edited. Safety logic editing makes it easier to construct and operate safe systems. Because it allows you to freely define the operating parameters (logic) for the safety monitoring functions in the robot controller, you can configure the safety monitoring conditions without having to use a safety CPU.

By configuring the parameters in the editing screen, you can use various different types of monitoring. For example, in area monitoring, specified functions operate in response to the robot position, while in interlock monitoring, specified safety functions operate according to the the positions of other robots.

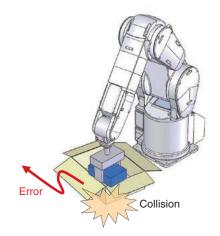

#### Safety logic editing screen

#### **Collision detection function (Standard feature)**

#### **Collision detection function**

- This function detects if the arm collides with an obstacle while teaching or operating, and helps reduce damage to the robot arm and tools.
- The collision detection function can be used to protect the workpiece from becoming damaged due to interference between the workpiece and affected objects.
- The detection level can be changed according to the protection targets.
- Operation following collision detection can be programmed to suit the circumstances.
- E.g.) Stop immediately and post an error; retract and then post an error, etc.
- Reduce tooling costs
- Shorten line stop times
- Reduce maintenance costs

### Program Creation and Total Engineering Support Software

#### **RT ToolBox3**

This is computer software to assist with a range of tasks from system startup through to debugging and operation. This includes creating and editing programs, checking the operating environment prior to robot installation, estimating cycle times, debugging when robots are started up, monitoring robots states once they are running and monitoring faults.

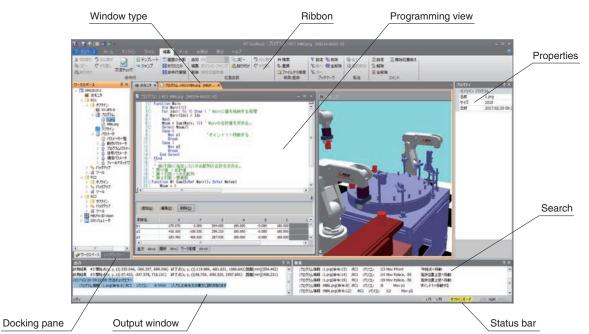

Its features include a ribbon bar, output window and docking pane, making information easier to see and the software easier to use. Operations in the 3D monitor screen have also been updated to make using the screen more intuitive.

| RT ToolBox3<br>mini | Simplified version.<br>Offers programming, debugging,<br>and monitoring functions.  |
|---------------------|---|
| RT ToolBox3         | Includes simulation functions.<br>May also be used for preliminary<br>examinations.   |
| RT ToolBox3<br>PRO  | Runs on 3DCAD (SolidWorks).<br>Allows even more realistic examinations.<br>CAD data can also be used for path<br>generation and operation programs. |

#### Program editing and debugging

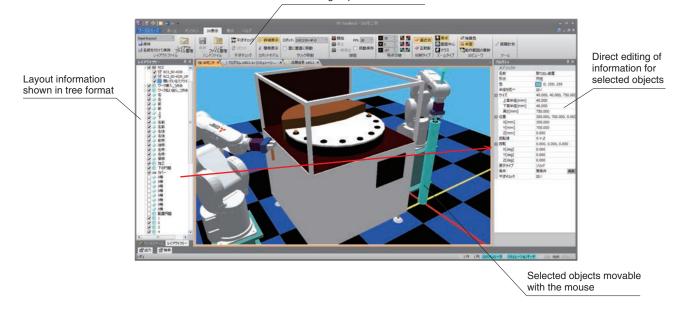

RT ToolBox3

Auto-complete and fold functions make programming easier to use.

#### Simulation function

Simulation that includes features such as robot dynamics and servo responses as well as robot controller emulation allows realistic simulations that include motor loading, tracking and positioning times.

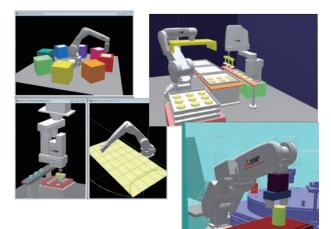

#### Functions grouped in the ribbon

#### **3D viewer**

The 3D viewer can be used to check the robot attitude and operation and to visually check information such as limit values for user-defined areas, etc.

#### Real time external control

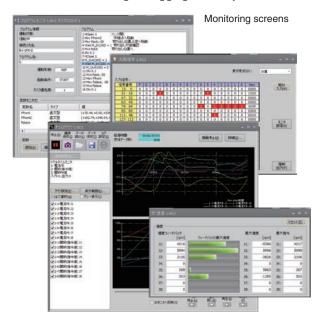

Robot movement can be controlled from the computer using synchronous units.

#### Melfa RXM.ocx communications middleware

Allows RT ToolBox functions to be run from computer applications.

#### **Monitoring functions**

As well as monitoring program run states, variables, input/ output signals and other events, these functions can show graphs of robot operation waveforms (speeds and current values) and I/O states in real time. This makes it easy to see the correlation between program execution steps and waveform data, making debugging markedly more efficient.

#### **MELFA BASIC VI**

As well as providing a more complete set of commands, this uses structured programming to give high levels of reusability and readability.

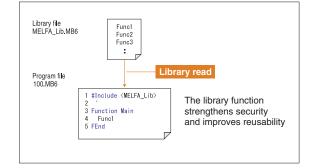

#### Structured programming

Allows structured programs, enabling programming with high levels of reusability and readability. (Also supports existing programming methods.)

#### Library function

Keeping a library of program processing allows knowledge to be accumulated and provides improved reusability. The libraries can also be hidden to prevent knowledge from being disclosed.

### MELFA RV-2FR RV-2FRL

Vertical 2kg type

Compact body and slender arms cover large work areas. An ideal robot for compact cell construction. Perfect for transporting, assembling and inspecting small components.

- Among the fastest moving robots in its class [Max. composite speed: 5.0 m/s] (RV-2FR)
- ■Standard cycle time
- [0.6 second range] (RV-2FR)
- ■Pivotal operating range: ±240°
- Environmental specifications [standard: IP30]

#### Standards compliance

Compliant with European Machinery Directives (CE) as standard. Compliance with other standards is available in specialized machines. Contact Mitsubishi Electric for details.

\*1: Please contact Mitsubishi Electric dealer since the environmental resistance may not be secured depending on the characteristics of oil you use. Air will need to be purged from the lines.

For details, refer to the specifications sheet.

- For details, refer to the specifications sheet. \*2: The value mounded specification is a custom specification where the operating range of the J1-axis is limited. \*3: This is the value at the surface of the mechanical interface when all axes are composited. \*4: Value for a 25mm up/down and 300mm horizontal reciprocal movement with 1kg load. The cycle time is the value for RV-4FR-R and RV-4FRL-R. \*5: This can also be used as a spare wire (0.15sq 4-pair wire). The wire is prepared up to inside the forearm. \*6: Select one of the following controllers according to the application. CR800-D: Standalone type, CR800-R: MELSEC IQ-R compatible type, CR800-Q: MELSEC Q Series compatible type. \*7: Preservation of cleanlines levels depends on conditions of a downstream flow of 0.3 m/s in the cleancroom and internal robot suctioning. A e8-mm coupler for suctioning is provided at the back of the base. \*8: The maximum load capacity indicates the maximum payload when the mechanical interface is facing downward (±10° to the perpendicular).

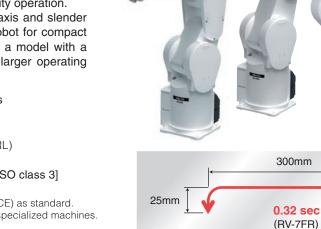

\*9: Please contact our sales offices if you request a five axes long arm model.

## MELFA **RV-7FR RV-7FRL RV-7FRLL**

**Vertical** 7kg type

Cutting-edge servo control and optimized arm construction provide extremely fast and precise heavy-duty operation. Increased range of movement along each axis and slender arms to cover large work areas. An ideal robot for compact cell construction. The product line includes a model with a maximum reach radius of 1503 mm for a larger operating range.

- Among the fastest moving robots in its class [Max. composite speed: 11.0 m/s (RV-7FR)]
- ■Standard cycle time [0.32 s (RV-7FR)]
- ■Pivotal operating range: ±240° (RV-7FR/7FRL)
- Environmental specifications
- [standard: IP40; oil mist: IP67; cleanroom: ISO class 3] ■Standards compliance
  - Compliant with European Machinery Directives (CE) as standard. Compliance with other standards is available in specialized machines. Contact Mitsubishi Electric for details.

\*1) The J6 axis range of motion is  $\pm 200$  deg. Protection level is IP40.

7: 7kg

Series

Robot structure RV: Vertical, multiple-joint type

Maximum load capacity

38

FR: FR series
Arm length
Blank: Standard arm
L or LL: Long arm

## MELFA **RV-13FR RV-13FRL**

Vertical 13kg type

Cutting-edge servo control and optimized arm construction provide extremely fast and precise heavy-duty operation. Optimized arm length and 6 joints for a broader range of movement support a wide range of layouts. Designed to withstand environmental conditions, it can be used in a wide range of applications without having to worry about the installation environment. Suitable for various types of work, such as transporting mechanical parts, assembling electrical components and even packaging products such as pharmaceuticals and foodstuffs.

- Among the fastest moving robots in its class [Max. composite speed: 10.5 m/s (RV-13FR)]
- ■Standard cycle time [0.53 s (RV-13FR)]
- ■Pivotal operating range: ±190°
- Environmental specifications

[standard: IP40; oil mist: IP67; cleanroom: ISO class 3] Standards compliance

- Compliant with European Machinery Directives (CE) as standard. Compliance with other standards is available in specialized machines. Contact Mitsubishi Electric for details.

## **RV-13FRL** 100 300mm 25mm 0.53 sec (RV-13FR)

Vision sensor Adapter cable

\*1) The J6 axis range of motion is ±200deg. Protection level is IP40.

- 1: Please contact missubish Liectric dealer since the environmental resistance may not be secured depending on the characteristics of oil you use.
  \*2: The wall-mounted specification is a custom specification where the operating range of the J1-axis is limited.
  \*3: This is the value at the surface of the mechanical interface when all axes are composited.
  \*4: Value for a 25mm up/down and 300mm horizontal reciprocal movement with 5kg load. The cycle time is the value for RV-13FR-R and RV-13FRL-R.
  \*5: Can also be used as a spare line (0.13 sq. mm, 4-pair cable) for conventional models. Provided up to the inside of the forearm.
  \*6: Select either controller according to your application. CR800-D: Standalone type, CR800-R: MELSEC Q-R compatible type, CR800-Q: MELSEC Q Series compatible type.
  \*7: Preservation of cleanliness levels depends on conditions of a downstream flow of 0.3 m/s in the cleanroom and internal robot suctioning. A e8-mm coupler for suctioning is provided at the back of the base.
- \*8: The maximum load capacity indicates the maximum payload when the mechanical interface is facing downward (±10° to the perpendicular).

## MELFA RV-20FR

## Vertical 20kg type

Highly portable RV-F series (maximum load capacity: 20 kg). Cutting-edge servo control and optimized arm construction provide extremely portable and precise heavy-duty operation. Optimized arm length and 6 joints for a broader range of movement support a wide range of layouts. Designed to withstand environmental conditions, it can be used in a wide range of applications without having to worry about the installation environment. Plenty of scope for using multiple grippers or multi-function grippers and capable of handling work such as transporting high-load mechanical parts, assembling electrical components and packaging pharmaceutical products.

- Standard cycle time [0.7 s]
- ■Pivotal operating range: ±190°
- Environmental specifications
- [standard: IP40; oil mist: IP67; cleanroom: ISO class 3] Standards compliance
  - Compliant with European Machinery Directives (CE) as standard. Compliance with other standards is available in specialized machines. Contact Mitsubishi Electric for details.

## Specifications

11: Operating range for the front and side parts: When the J1-axis angle is inside the range of J1<sub>2</sub>+120° or J1<sub>2</sub>-130°, the operating range of the J2-axis is limited to -90°<sub>5</sub>J2<sub>4</sub>+130°.
12: Make sure to leave enough space open for cable connections between devices.
13: Specify a thread engagement length of 10 a mm.
14: Refer to the standard specification manual for detailed specification of -SH.

\*1: Please contact Mitsubishi Electric dealer since the environmental resistance may not be secured depending on the characteristics of oil you use. \*2: The wall-mounted specification is a custom specification where the operating range of the J1-axis is limited.

- \*3: This is the value at the surface of the mechanical interface when all axes are composited. \*4: Value for a 25mm up/down and 300mm horizontal reciprocal movement with 5kg load. The cycle time is the value for RV-20FR-R

 \*5: Can also be used as a spare line (0.13 sq. mm, 4-pair cable) for conventional models. Provided up to the inside of the forearm.
 \*6: Select either controller according to your application. CR800-D: Standalone type, CR800-R: MELSEC iQ-R compatible type, CR800-Q: MELSEC Q Series compatible type.
 \*7: Preservation of cleanliness levels depends on conditions of a downstream flow of 0.3 m/s in the cleanroom and internal robot suctioning. A ø8-mm coupler for suctioning is provided at the back of the base.

\*8: The maximum load capacity indicates the maximum payload when the mechanical interface is facing downward (±10° to the perpendicular).

3

## MELFA RH-3FRH35 RH-3FRH45 RH-3FRH55

Horizontal 3kg type

Ideal for compact cell construction, such as assembling or transporting small workpieces.

- Among the fastest moving robots in its class [XY composite: 8,300 mm/s]
  - [J4 (*θ* axis): 3,000 deg/s]
- Standard cycle time
- [0.41 s (RH-3FRH35)]
- ■Pivotal operating range: ±170°
- Environmental specifications [standard: IP20; cleanroom: ISO class 3]

## Standards compliance

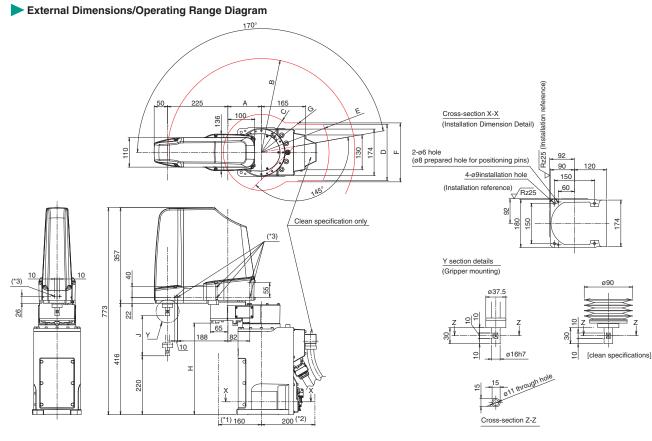

Compliant with European Machinery Directives (CE) as standard. Compliance with other standards is available in specialized machines. Contact Mitsubishi Electric for details.

RH-3FRH5515 D Controller type Robot structure RH: Horizontal, multiple-joint type D: CR800-D R: CR800-R Maximum load capacity Q: CR800-Q 3: 3kg Environment specification Blank: Standard specifications Series FRH: FR series C: Cleanroom specifications Arm length Vertical stroke 35: 350mm 12: 120mm 45: 450mm 15: 150mm 55: 550mm

- \*1: The range for vertical movement listed in the environmental resistance specifications (C: Clean specifications) for the RH-3FRH is narrower than for the standard model. Keep this in mind when working with the RH-3FRH. The environment-resistant specifications are factory-set custom specifications.
  \*2: The value assumes composition of J1, J2, and J4.
  \*3: Value for a maximum load capacity of 2 kg. The cycle time may increase if specific requirements apply such as high work positioning accuracy, or depending on the operating position. (The cycle time is based on back-and-forth movement over a vertical distance of 25 mm and horizontal distance of 300 mm.)
  \*4: Can also be used as a spare line (0.2 sq. mm, 4-pair cable) for conventional models.
  \*5: Select either controller according to your application. CR800-D: Standalone type, CR800-R: MELSEC IO-R compatible type, CR800-Q: MELSEC Q Series compatible type.
  \*6: Presenvation of cleanificance for surfacionis of 0.2 m/c is the cleanorm ontil termal mode surfaces for surfacionis is provided at a surface of 20 mm.)

\*6: Preservation of cleanliness levels depends on conditions of a downstream flow of 0.3 m/s in the cleanroom and internal robot suctioning. A ø8-mm coupler for suctioning is provided at the base

## MELFA RH-6FRH35 RH-6FRH45 RH-6FRH55

## Horizontal 6kg type

A horizontal, multiple-joint type robot with highly rigid arms and cutting-edge servo controls to provide extremely fast and precise heavy-duty operation. Ideal for a wide range of fields, from transportation of small components that demands highspeed operation through to assembly work where excellent precision is required.

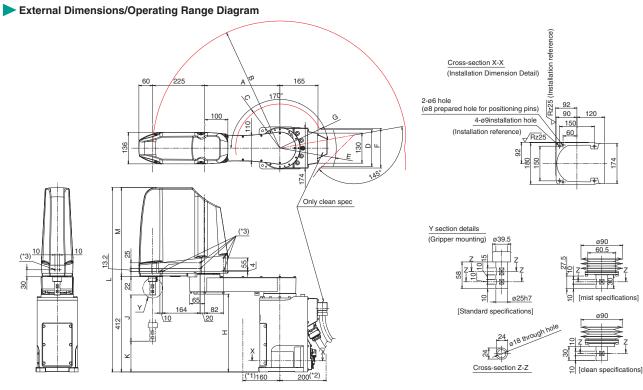

- Among the fastest moving robots in its class [XY composite: 8,300 mm/s] [J4 ( $\theta$  axis): 2,400 deg/s]
- Standard cycle time [0.29 s (RH-6FRH55)]
- ■Pivotal operating range: ±170°
- ■Environmental specifications
- [standard: IP20; oil mist: IP65; cleanroom: ISO class 3] Standards compliance
  - Compliant with European Machinery Directives (CE) as standard. Compliance with other standards is available in specialized machines. Contact Mitsubishi Electric for details.

**9** Robot Specifications

\*1: The environmental resistance specifications (M: Oil mist specifications, C: Cleanroom specifications) for the RH-6FRH is factory-set custom specifications.
\*2: The value assumes composition of J1, J2, and J4.
\*3: Value for a maximum load capacity of 2 kg. The cycle time may increase if specific requirements apply such as high work positioning accuracy, or depending on the operating position. (The cycle time is based on back-and-forth movement over a vertical distance of 25 mm and horizontal distance of 300 mm.)
\*4: Can also be used as a spare line (0.2 sq. mm, 4-pair cable) for conventional models.
\*5: Select either controller according to your application. C: Standalone type, CR800-R: MELSEC iQ-R compatible type, CR800-Q: MELSEC Q Series compatible type.
\*6: Pease contact Mitsubishi Electric dealer since the environmental resistance may not be secured depending on the characteristics of oil you use. Direct jet to the bellows is excluded.
\*7: Preservation of cleanliness levels depends on conditions of a downstream flow of 0.3 m/s in the cleanroom and internal robot suctioning. A e8-mm coupler for suctioning is provided at the back of the base.

Horizontal 12/20kg type

A horizontal, multiple-joint type robot with highly rigid arms and cutting-edge servo controls to provide extremely fast and precise heavy-duty operation. Enhancements to the wrist axis also mean that the robot has ample scope for handling multi-function grippers and offset grippers. Ideal for assembly and palletizing work.

- Among the fastest moving robots in its class [XY composite:13,283 mm/s (RH-20FRH)] [J4 (θ axis): 2,400 deg/s (RH-12FRH)]
- Standard cycle time [0.30 s (RH-12FRH85)]
- ■Pivotal operating range: ±170°
- Environmental specifications [standard, Oil mist: IP65; cleanroom: ISO class 3]

## Standards compliance

Compliant with European Machinery Directives (CE) as standard. Compliance with other standards is available in specialized machines. Contact Mitsubishi Electric for details.

- \*1: The environmental resistance specifications (M: Oil mist specifications, C: Cleanroom specifications) is factory-set custom specifications.
  \*2: The value assumes composition of J1, J2, and J4.
  \*3: Value for a maximum load capacity of 2 kg. The cycle time may increase if specific requirements apply such as high work positioning accuracy, or depending on the operating position. (The cycle time is based on back-and-forth movement over a vertical distance of 25 mm and horizontal distance of 300 mm.)
  \*4: Can also be used as a spare line (0.2 sq. mm, 4-pair cable) for conventional models.
  \*5: Select either controller according to your application. CR800-D: Standalone type, CR800-Q: MELSEC Q Series compatible type.
  \*6: Please contact Mitsubishi Electric dealer since the environmental resistance may not be secured depending on the characteristics of oil you use. Direct jet to the bellows is excluded.
  \*7: Preservation of cleanliness levels depends on conditions of a downstream flow of 0.3 m/s in the cleanroom and internal robot suctioning. A ø8-mm coupler for suctioning is provided at the back of the base.

## MELFA Controller CR800-R/Q/D

## **CR800-R CR800-Q CR800-D**

## MELSEC iQ-R/Q compatible robot controller

Uses a multi-CPU configuration that dramatically improves its interaction with FA equipment and also offers highly precise control and fast yet simple information management.

## Standalone type robot controller

Can be constructed as the control nucleus for robot controllers.

CR800-D

\*\*1: For installing option interface. \*2: The rate of power-supply voltage fluctuation is within 10%. \*3: The power capacity indicates the rating for normal operation. Take note that the power capacity does not include the currentbeing input when the power is turned on. The power capacity is only a rough guide and whether or not operation can be guaranteed depends on the input power-supply voltage. \*4: Grounding works are the customer's responsibility. \*5: Recommended USB cable (USB A-to-USB mini B): MR-J3USBCBL3M (Mitsubishi Electric), GT09-C30USB-5P (Mitsubishi Electric System & Service Co., Ltd) \*6: RV-2FR series has 4 inputs and 4 outputs. \*7: Mode selection switch provided by the customer.

## RV-4FR/7FR/13FR/20FR series tooling machine configurations

The required options differ depending on the gripper (tool) configuration. The table below lists the "Forearm external wiring sets" and "Base external wiring sets" required for the different gripper configurations. Select wiring sets accordingly.

|  |                                  |                        | Required e                     | quipment                         |   |
|--|----------------------------------|------------------------|--------------------------------|----------------------------------|---|
| Gripper configuration                                      | Wiring mode                      | Body<br>specifications | Forearm external<br>wiring set | Base external<br>wiring set (*3) | Comment   |

\*1: For pnumatic grippers with internal wiring, solenoid valves should be provided. \*2: For pnumatic grippers with external wiring, solenoid valves, tubing and input cables, etc. should be provided as necessary. \*3: For machines with internal wiring and tubing, a base external wiring set is included with the machine and does not need to be provided separately.

RH-3FHR and 6FHR RH-12FHR and 20FHR

When grippers or various other tools are mounted on the end of the arm, this solenoid valve option is used to control those tools. Fitted with features such as manifolds, couplings and connectors to facilitate mounting on the robot body.

The solenoid valve attachment shapes differ depending on the robot. Note the attachment shape before using.

| Ha                        | nd output cable                          |
|---------------------------|--|
|                           |  |
| Cable size × No. of cores | AWG#24 (0.2 mm <sup>2</sup> ) × 12 cores |
| Total length:             | 300 mm (RV), 1050 mm (RH)                |

Useful for using solenoid valves other than the optional solenoid valve set.

One end can be connected to the gripper signal output connector in the robot. The other end is unterminated (bare cable).

Hand input cable

 Total length:
 1000 mm (RV), 1650/1800 mm (RH: Includes a 350 mm curled section)

 Used when the air gripper is designed by the customer. Used to convey gripper open/close confirmation signals and grip confirma

AWG#24 (0.2 mm2) × 12 cores

RН

tion signals to the controller. One end can be connected to the gripper signal input connector on the top of the robot body. The other end is connected to a sensor in the gripper designed by the customer.

Hand curl tube

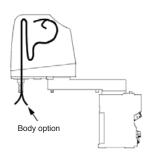

| Material  | Urethane  |
|-----------|---|
| Size (mm) | 4 mm dia. (external), 2.5 mm dia. (internal); length:<br>180 mm curled section, 250 + 200 mm straight section |

Curl tube for air gripper.

RV

Cable size × No. of cores

## Internal wiring and tubing set for grippers

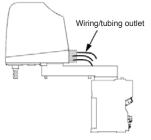

An air tube and cable set used to run input signal cables from inside the second arm to the shaft tip. An air tube and gripper input signal cable set.

Includes grease (for applying to the upper part of the shaft), silicon rubber and cable ties.

## External user wiring and tubing box

This is a useful option for taking air tubes and signal wires out from the back end of the second arm or running gripper wiring and/or tubing outside the robot. Features a coupling for exiting air tubes and a hole with cable clamps to secure exiting signal wires. Optional gripper output cables and gripper input cables can be secured.

## J1 axis movement range modification

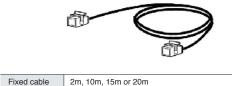

|         | RV (*1)                                | RH                               |
|---------|--|----------------------------------|
| +J1     | (Standard +240°)<br>+210°, +150°, +90° | (Standard +170°)<br>+150°, +130° |
| -J1     | (Standard -240°)<br>-210°, -150°, -90° | (Standard -170°)<br>-150°, -130° |
| *1: For | RV-2FR or RV-2FRL.                     |                                  |

Refer to the specifications for information on other models.

The J1 axis range of movement is limited by mechanical stoppers on the robot body and by the controller parameters. Use this feature when the range of movement needs to be limited due to problems such as interference with nearby devices.

## Machine cable (replacement)

| Flexible cable | 10, 15 or 20 m; min. bend radius: 100 R or more |
|----------------|---|

Used for replacement of the standard machine cable (5 m) included to extend the distance between robot controller and the robot main unit and connect it. There are 2 types of cables: fixed and flexible. Both type consists of motor signal cable and motor power cable.

## Simple teaching box

| R32TB                | R32TB  |  |  |
|----------------------|--|--|--|
| External dimensions  | 195 (W) × 292 (H) × 106 (D) mm               |  |  |
| Weight               | Approx. 0.9 kg (body only, excluding cables) |  |  |
| Display              | LCD type: 24 characters × 8 rows, backlit    |  |  |
| Display<br>languages | Japanese, English                            |  |  |

Used for creating, editing and managing programs, to teach operating positions and for jogging. Fitted with a 3-position enabling switch to ensure safe use.

When multiple robots are used, the connections can be switched to a single teaching box. The connections can be switched when the power is shut off.

## Parallel input/output unit

| Model                | DC input               |              |
|----------------------|------------------------|--------------|
| No. of outputs       | 32                     |              |
| Isolation method     | Photocoupler is        | olation      |
| Rated input voltage  | 12 V DC                | 24 V DC      |
| Rated input current  | Approx. 3 mA           | Approx. 7 mA |
| :Output>             | -                      |              |
| Model                | Transistor output      |              |
| No. of outputs       | 32                     |              |
| Isolation method     | Photocoupler isolation |              |
| Rated load voltage   | 12/24 V DC             |              |
| Maximum load current | 0.1 A/output           |              |

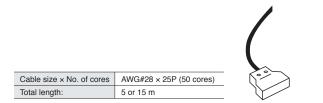

Used when external input/outputs are added.

Connector cables for external devices are not included. External input/output cables (for parallel input/output units) are available as options.

Both sink and source types are available.

External input/output cables (for parallel input/output units)

This is a dedicated cable for connecting external peripheral devices to parallel input/output unit connectors.

One end is matched to the parallel input/output unit and the other end is unterminated. Input/output signals from peripheral devices should connected via the unterminated end of the cable. One cable supports 16 inputs and 16 outputs. If a parallel input/output unit is installed, 32 inputs and 32 outputs are connected per unit, so two cables must be added.

## High-performance teaching box

## See P.66 for details.

| External dimensions  | 252 (W) × 240 (H) × 114 (D) mm                          |   |
|----------------------|---|---|
| Weight               | Approx. 1.3 kg (body only, excluding cables)            |   |
| Interface            | USB port (1)  | l |
| Display              | 6.5-Inch TFT (640 × 480)<br>Color touch-screen, backlit |   |
| Display<br>languages | Japanese, English                                       |   |

R56TB

High-performance teaching box with improved monitor function in addition to the R32TB function.

## Parallel input/output interface

| Model                                  | DC input                      |              |  |
|--|-------------------------------|--------------|--|
| No. of outputs                         | 32                            |              |  |
| Isolation method                       | Photocoupler isolation        |              |  |
| Rated input voltage                    | 12 V DC                       | 24 V DC      |  |
| Rated input current                    | Approx. 3 mA                  | Approx. 9 mA |  |
| <output></output>                      |                               |              |  |
| Model                                  | Transistor output             |              |  |
| No. of outputs                         | 32                            |              |  |
|  | Photocoupler isolation        |              |  |
| Isolation method                       | Photocoupler is               | olation      |  |
| Isolation method<br>Rated load voltage | Photocoupler is<br>12/24 V DC | olation      |  |

Installing this option on the controller allows external input/output to be used.

Connector cables for external devices are not included. External input/output cables (for parallel input/output interfaces) are available as options. The input/output specifications are the same as for PLC interfaces

External input/output cables (for parallel input/output interfaces)

Both sink and source types are available.

AWG#28 × 20P (40 cores) Cable size × No. of cores Total length: 5 or 15 m

This is a dedicated cable for connecting external peripheral devices to parallel input/output interface connectors.

One end is matched to the parallel input/output interface and the other end is unterminated. Input/output signals from peripheral devices should connected via the unterminated end of the cable. One cable supports 16 inputs and 16 outputs. If a parallel input/output interface is installed, 32 inputs and 32 outputs are connected per unit, so two cables must be added.

## **CC Link Interface**

| Communication<br>functions  | Bit/word data transfer                               |       |
|-----------------------------|--|-------|
| Station type                | Intelligent device station                           | 1 and |
| Support station             | Local station<br>(no master station function)        |       |
| CC-Link-compatible version  | Ver.2, allows extended cyclic<br>configuration       |       |
| No. of isolated<br>stations | Isolation of 1, 2, 3 or 4 stations can be configured |       |

The CC-Link interface option augments CC-Link functionality by allowing cyclic transmission of word data as well as bit data to the robot controller.

## EtherNet/IP-compatible network base card

| Installation module            | AB6314              |
|--------------------------------|---------------------|
| Transmission<br>specifications | 10BASE-T/100BASE-TX |
| No. of inputs                  | Max. 2,048          |
| No. of outputs                 | Max. 2,048          |
|                                |                     |

EtherNet/IP communication can be achieved by having the customer install an HMS Anybus-CompactCom module (order code: AB6314) in the network base card (2D-TZ535).

## Safety option

Allows people to approach and enter the work area without stopping the robot.

|                  | Input signal                | 8 systems (duplicated) |
|------------------|-----------------------------|------------------------|
| Safety expansion | Output signal               | 4 systems (duplicated) |
| unit             | External dimensions         | 115 × 168 × 100mm      |
|                  | Applicable robot controller | CR800-R/Q/D            |

## CC-LinklE Field-compatible network base card

| Installation module         | AB6709             |
|-----------------------------|--------------------|
| Transmission specifications | 1Gbps (1000BASE-T) |
| No. of inputs               | Max. 2,048         |
| No. of outputs              | Max. 2,048         |
|                             |                    |

CC-Link IE Field communication can be achieved by having the customer install an HMS Anybus-CompactCom module (order code: AB6709) in the network base card (2F-DQ535).

## PROFINET-compatible network base card

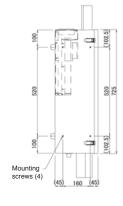

| Installation module            | AB6489-B   |
|--------------------------------|------------|
| Transmission<br>specifications | 100BASE-TX |
| No. of inputs                  | Max. 2040  |
| No. of outputs                 | Max. 2040  |
|                                |            |

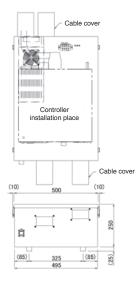

PROFINET IO communication can be achieved by having the customer install an HMS Anybus-CompactCom module (order code: AB6489-B) in the network base card (2D-TZ535-PN).

## **Controller protection box**

Houses a controller and provides protection against dust and water. (IP54)

## **R56TB**

## Model R56TB

## TFT color LED display provides colorful displays for greater ease of operations.

The new R56TB teaching box delivers enhanced robot operations.

Outfitted with monitoring functions on par with PC support software, it has become even easier to use to edit programs, set parameters, and display I/O status.

The touch panel GUI allows easy programming and monitoring, and switches arranged around the panel ensure efficient robot operations.

**Features** 

The teaching box is also equipped with a USB memory interface for backing up controller data without the use of a PC.

R56TB is...

An upgraded teaching box model to R32TB. In addition to "training" the robot, its LCD display and monitoring functions can be effectively used for debugging tasks.

## Specifications/Functions

| Item                | Specification   |  |
|---------------------|---|--|
| External dimensions | 252mm (W) × 240mm (H) × 114mm (D)   |  |
| Body color          | Dark gray   |  |
| Weight              | 1.3kg (main unit only, excluding cable)   |  |
| Connection method   | hod Connection with controller using a dedicated connector  |  |
| Interface           | 1 USB port  |  |
| Display             | 6.5" TFT color LCD display; 4 status indicator LEDs   |  |
| Operation panel     | Touch panel, emergency stop button, enabling switch (3 positions),<br>TB button, wheel, 30 operation keys |  |
| Display languages   | Japanese, English   |  |

•Adopts a VGA (640×480) full-color toucAh panel for user-friendly screen layouts. • Visual menu screens ensure

• Program editing screens use

a large layout (6.5") to dis-

play programs in an easy-to-

• Programs can be written and

parameter names entered easily using the keyboard

Text can also be entered

understand fashion.

using a stylus pen.

## **USB** connection interface

By connecting USB memory, controller data may be backed up without the need to have a PC on site. Program information, parameter information, system information, and other such data may be backed up, as with a PC

## Enhanced user-friendliness

The teaching box can be held with one gripper by gripping the grip handle, and the enable switch operated with a finger on the same gripper. The other gripper can be used to operate the touch panel and buttons. The right and left grippers may be interchanged.

## User-defined screen functions

Monitor screens may be individually created to suit each user's debugging task. Debugging time is shortened by being able to easily display the screen to monitor.

## **Operations panel**

The robot operations screen provides the same functions as the robot controller panel, and may be used to activate such automated operations as servo on/off, startup, shutdown, reset, and program selection

## Functions on par with PC software

screen.

Program screens

Monitoring screens

• Program debugging time can be shortened via screen operations, such as the I/O monitor screen, which was not available with R32TB.

## **Force Sensor Set**

## Model 4F-FS002H-W200/1000

## Assembly/processing tasks are performed in the same manner as a human being, while sensing the force that is applied to the gripper. Tasks requiring subtle adjustment and detection of force can be performed.

## Improved production stability

Parts can be inserted/attached without damage, while adjusting for displacement absorptions caused by parts variations and subtle external forces. Work stability is improved by position latching and retry processing at times of work failure. Furthermore, quality can be managed using log data, and the causes of work errors can be analyzed.

## Realization of complex assembly and processing tasks

Parts can be inserted/attached without damage, while adjusting for subtle external forces. Action direction and pushing force can be changed by detecting the contact force, and interrupt processing can be performed using trigger conditions that combine position information and force information.

## Easy control

Programs can be easily created using dedicated robot language. Based on representative examples of application programs, work programs can be easily created in response to each customer's required task.

## Simple operations

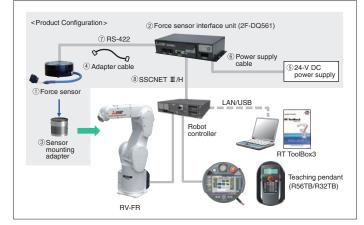

The robot can be quickly "taught" accurate positions based on position and force data from the teaching box. Work conditions can be verified and adjusted by viewing the position and force data from the teaching box and the graph waveform on RT ToolBox3.

## **Product features**

 1F-SFLGSET-02

## MELFA-3D Vision 2.0 Model 4F-3DVS2-PKG3

This compact 3D vision sensor for small robots delivers high-speed, high-accuracy measurements. It is an optimum replacement for a parts feeder, and performs high-speed picking owing to its unique model-less recognition processing.

## Compact and lightweight

The compact and lightweight body (camera head: 146×87×137 mm, approx. 0.9kg) is ideal for fixed installations and eye-in-gripper configurations.

## High-speed, high-accuracy measurement

High-accuracy measurement is realized by a high-speed recognition of 0.2 seconds at the quickest (model-less recognition) and a minimum measuring error of approx. 0.3mm.

## As a replacement for a parts feeder

One of two types of recognition methods may be selected.

- Model-less recognition: The position of a workpiece is recognized without registering its model
- Model matching recognition: Workpiece pose is recognized using a 3D-CAD model

Compared to a parts feeder, the 3D vision sensor is less expensive and has a smaller footprint (when handling multiple parts). Retry operations can reduce frequent stoppages.

## Connection compatibility befitting a robot manufacturer

Direct connection is possible via LAN, which is equipped on the controller as a standard feature, and sensor settings and operation checks can be made easily using a PC. The PC, however, is not needed while the sensor is operating. The sensor can calibrate the coordinates of the robot and vision sensor as a standard feature, and realize easy control by using dedicated commands that have been added to MELFA-BASIC.

## Product specifications

| Item                              | Specifications   |
|-----------------------------------|--|
| Measurement method (*1)           | Triangulation method (Pattern light projection type)   |
| Measurement time                  | Approx. 1.3 to 1.8 seconds   |
| Recognition method                | Model-less: Workpiece registration-free method<br>(6 degrees of freedom: XYZABC)<br>Model matching: 3D-CAD utilizing method<br>(6 degrees of freedom: XYZABC)                              |
| Processing time (*2)              | Model-less: Approx. 1.2 to 2 seconds<br>⇒ Approx. 0.2 to 1.0 seconds * During measurement<br>Model matching: Approx. 1 to 2.2 seconds<br>⇒ Approx. 0.9 to 1.5 seconds * During measurement |
| Measurement efficient points (*3) | Approx. 300000 to 600000 points  |
| Measurement viewing angle (*3)    | Approx. 15 to 20 degrees (standard field-of-view)/<br>Approx. 20 to 28 degrees (extended option field-of-view)   |
| Workpiece distance (*4)           | 300 to 1000 mm   |
| Measuring error (*3)              | 0.3 mm or more   |
| External dimensions (*5)          | Camera head section (Minimum size, W indicates 3-step variable) 146 (W) $\times$ 87 (H) $\times$ 137 (D) mm  |
| Weight                            | Approx. 0.9 kg (Camera head part)  |
| General specifications            | Ambient temperature: 5 to 40°C (Camera head section: 0 to 40°C)<br>Ambient humidity: 45 to 85%RH, with no condensation<br>Usage atmosphere: With no corrosive gas                          |
| Power supply                      | 24 V   |

\*1) Shielding measures may be required depending on the usage environment, such as when surrounding environmental light affects the sensor.

\*2) The standard time from the recognition start to output. The process may take longer than the standard time depending on the conditions of surrounding environment, workpieces, and processing parameters.

\*3) The number of effective points varies depending on the conditions including the sensor installation distance and lens used. \*4) The range of the distance between the lens installation flange face and a position to be

measured. All areas cannot be used at the same time. For details, refer to instruction manuals

## \*5) The size of the camera head section depends on the mounting base in use

## Components

| No. | Name  | Quantity |
|-----|---|----------|
| 1   | Camera head (dedicated communication cable and power cable enclosed)        | 1        |
| 2   | Mounting base set (Small: Mounted at shipment, medium, large)               | 1        |
| 3   | Calibration jig   | 1        |
| 4   | CD-ROM<br>(MELFA-3D Vision software, instruction manual, setup guide, etc.) | 1        |

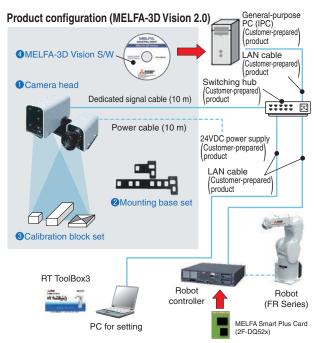

## Products prepared by customers

| Name                                   | Description  | Quantity |
|--|--|----------|
| Personal computer<br>(3DV control IPC) | OS: Windows 10 Professional/Enterprise (64bit) <sup>(*1)</sup><br>CPU: Intel Core i-7 (4 cores or more)<br>RAM: 4[GB] or more / HDD: 100[GB] or more<br>(*8[GB] or more is required when using MELFA Smart Plus.)<br>Gigabit Ethernet port×1 | 1 unit   |
| Personal computer (for setting)        |  |          |
| Switching hub                          | 1000BASE-T or later  | 1 unit   |
| LAN cable                              | V cable Category 5e or later   |          |
| 24 VDC power supply                    | r supply For camera head   |          |

## Precautions

- 1. The following workpieces cannot be measured.
- Transparent objects and mirror face objects
- The following workpieces may be difficult to be measured or recognized.
  High-gloss objects, black objects, or deep color objects
- 3. Workpiece size (Reference values) Model-less: Short side = 1/25 of the viewing field size to Long side = 1/3 of the viewing field size
- Model matching: Short side = 1/10 of the viewing field size to Long side = 1/3 of the viewing field size \*The workpiece size depends on the conditions of the workpiece distance, sensor
- parameters, and the shape and surface of the workpiece. The reference values are based
- on Mitsubishi test conditions. For details, refer to instruction manuals. Whether the measurement can be performed or not and the measurement accuracy depend on individual conditions. For details, please contact Mitsubishi.
- 5. For model-less picking, a 2D vision sensor may be required in addition to a 3D vision
- sensor. 6. The applicable model is the vertical, multiple-joint type RV-F Series.

\*Required only when using AI function

## **RT ToolBox3**

## Model 3F-14C-WINJ/3F-15C-WINJ

## Software for program creation and total engineering support.

This is PC software that supports all processes from system startup to debugging and operations, including programming and editing, verification of the scope of operations prior to introducing a robot, estimation of tact time, robot debugging prior to startup, and monitoring of robot conditions and malfunctions during operations.

## Windows<sup>®</sup> compatible

- Easy operations on Windows<sup>®</sup>
- Compatible with Windows®XP, Windows®Vista, Windows®7, 8, 8.1, 10 (32-bit version 1.8 or later, 64-bit version 2.0 or later)

## Simulation functions

- Compatible with all models that connect to the CRn-500 Series, CRn-700 Series, CRn-750 Series, and CRn-800 Series controllers.
- Robot movements and tact times can be calculated using a PC (not available with the mini version).
- Robot movements, operational status, input signals, and servo conditions can be monitored.

### Program editing and debugging functions Programs are created using MELFA-BASIC IV, V and VI.<sup>11</sup>

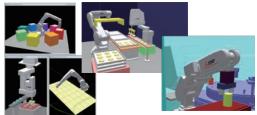

A multi-window format has been adopted for greater work efficiency and enhanced editing.Operations such as program step executions and breakpoint settings can be conveniently verified.

## 3D viewer

The 3D viewer allows easy verification of robot poses and movements, verification of the limit values of user-defined parameters, and virtual placements of peripheral devices by basic objects.

It can also be used to check for interferences between the robot and peripheral devices. Distance measuring functions are also available on the screen.

\*1: MELFA BASIC is a language that has been developed based on the usability and user-friendliness of the widely-used conventional BASIC language, with the addition of commands needed for robot control. MELFA BASIC IV/V not only offers these additional commands, but also incorporates structuring and parallel processing functions that were difficult to realize with BASIC, for even greater ease of use and detailed control.

## Full support, from programming to startup and maintenance

- Programs can be edited using MELFA-BASIC IV, V and VI and (varies depending on the model).
- Robot movements, operational status, input signals, and servo conditions can be monitored.

## Enhanced maintenance functions

- Equipped with a maintenance forecast function that notifies users of the robot's greasing time and battery life, and an assistance function for position recovery in the event of trouble, the software is effective for preventive maintenance and for shortening recovery time.
- Data is managed by project, to allow collective backup of the entire system.

## Simulation functions

Programs that have been created can be executed in the PC, movements can be verified, and the tact times of specified parts of a program can be measured. Such simulation functions are also effective for preliminary system examinations. Servo simulations can also be performed, for preliminary examination of loads. Signals can be coordinated with GX works2 and GX works3 for easy creation of line simulators. A maximum of 8 robots can be operated, and coordinated movements among robots can be verified.

### Monitoring functions

Program execution status, variables, I/O signals, etc. can be monitored.

## Maintenance functions

Maintenance functions include maintenance forecasts, position recovery support, parameter management, etc.

\*Windows® is registered trademark of Microsoft Corporation in the United States and other countries.

Model 3F-16D-WINJ

## A 3D robot simulator that provides powerful support for system designs and preliminary layout examinations.

RT ToolBox3 Pro allows robot simulations to be run on SolidWorks® 3D CAD software. Programs can be created to match today's era of high-mix, low-volume production, such as for layout considerations prior to introducing robots, desktop program debugging, and generation of complex motion paths.

## By linking an add-in tool to SolidWorks® 3D CAD software, robot simulation functions can be added on to SolidWorks® platform.

\*1) SolidWorks® is a registered trademark of SolidWorks Corporation (USA)

\*2) An add-in tool is a software program that adds certain functions to application software packages

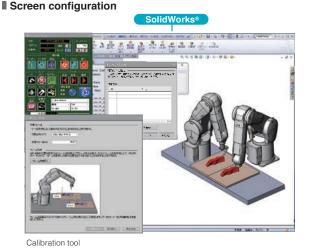

Features

## Automatic robot program creation function

By loading 3D CAD data (\*3) of the relevant workpiece to SolidWorks® and setting processing conditions and areas, teaching position data and robot movement programs that are necessary to operate the robot can be generated automatically. Programs can be automatically created even for workpieces with complex shapes that require multiple teaching position data.

\*3) Formats that can be loaded into SolidWorks®

robot.

## List of functions

## Data loading from peripheral devices and making rearrangements

Data of parts created with SolidWorks® can be loaded into the simulator. The loaded parts can be arranged relative to the CAD origin or other parts. They can also be rearranged by numerical input.

## Installation of grippers

Grippers designed and created with SolidWorks® can be installed on selected robots. An Auto Tool Changer (ATC) can also be specified for each gripper

## Handling workpieces

Workpieces can be handled without fail by simulating gripper signal control using a robot program.

### **CAD** links

Work data for performing sealing operations and other such tasks that require many Work data for performing sealing operations and online such tasks that require imany teaching steps can be easily created by selecting the processing area on the 3D CAD data. Since work data is created from 3D CAD data, even complex 3D curves can be generated, and the number of teaching steps can be significantly reduced.

### Offline teaching

Robot poses can be "taught" on screen, in advance.

## Creation of robot programs (templates)

Workflows can be created by combining offline teaching and CAD links, and converted to robot programs (MELFA BASIC IV, V format).

### Specifying robot programs

Robot programs may be used as they are without modifications, and can be specified for each task slot

## Simulation of robot operations

Robot programs, including I/O signals, can be simulated. That is, the operations of the actual system can be reproduced as they are. The I/O signals of a robot controller may be simulated according to two methods: (1) by defining movements associated with I/O signals in a simple manner, or (2) by linking robot programs with 02 construction GX Simulator2/3.

### **Displaying robot trajectories**

The trajectories of robot operations can be displayed by locus lines in space.

## Interference checks

Interferences between the robot and peripheral devices can be checked. Items that are to be subject to an interference check may be specified simply by clicking on it on screen. If an interference is detected, information about the interference (name of the part, the program line that was executed and the position of the robot when the interference occurred, etc.) may be stored in a log file

### Saving videos

Simulated operations can be saved to a video file (AVI format)

### Measurement of cycle times

The cycle time of robot operations can be measured in a manner resembling a stopwatch. The cycle time of specified locations of a program can also be measured.

## Robot program debugging functions

The following functions are provided for debugging robot programs • Stepped operation: Specified programs are executed one step at a time. • Breakpoint: Breakpoints can be inserted in a specified program. • Direct execution: Arbitrary robot commands are executed

### Jog function

A robot displayed in SolidWorks® can be jogged, just as a teaching box can jog a

### Traveling axis

A travelling axis can be installed in the robot, for examination of the operations of a system equipped with a traveling axis.

### Calibration

The point sequence data of CAD coordinates created using CAD links is corrected into robot coordinate data, and the operations program and point sequence data are sent to the robot. In consideration of the frequent need for calibration onsite, the calibration tool is an application separate from SolidWorks®, designed to run efficiently on a laptop PC that does not have SolidWorks® software.

## Multifunctional Electric Gripper Option

The multifunctional electric gripper option supports customer's various applications with various functions, great lineup, and highly accurate gripping

## Highly advanced control impossible with air cylinders

Grip force/speed setting according to the target workpiece

Grip patterns can be set according to the grip target, such as soft workpieces and heavy workpieces, with the torque specification and grip speed setting.

## Operation stroke setting according to the shape of the target workpiece

Even when target workpieces are different in size, the optimal stroke can be specified with the operation position specification.

Easily applied to inspection, in addition to workpiece handling

Applications to inspection are possible with feedbacks of the torque or position of the gripper, including whether a workpiece is gripped or not or whether a workpiece is acceptable or not with workpiece dimension measurement.

## New applications will be available.

2) Robot cable 2) Electric gripper control unit 2) Gripper cable 2) Gripper cable (Note 1) 1) Electric gripper 4) Option range> For RV-2F (Refer the next page for other models. Components

|    | Name                          | Quantity | Remarks  |
|----|-------------------------------|----------|--|
| 1) | Electric gripper              | 1        | Select the model by the grip force and stroke.       |

## WIRING SOLUTION

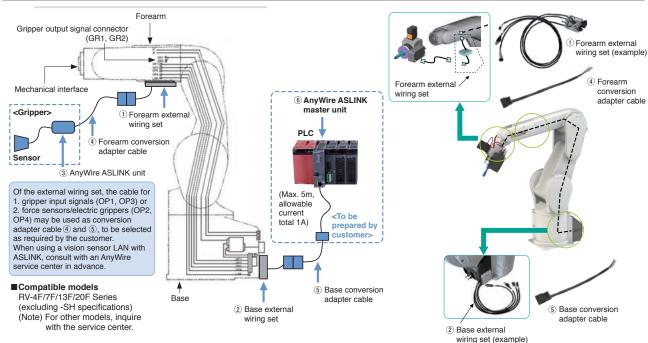

The AnyWire ASLINK wiring system can be incorporated in MELFA robots, to resolve gripper wiring problems. By connecting the AnyWire dedicated cable unit to the standard wiring of a conventional robot, all 256 I/O points of the robot gripper can be used without drawing external wiring to the robot arm.

## By introducing AnyWire ASLINK...

## MELFA × AnyWire ASLINK wiring/device calibration

## **YOUR SOLUTION PARTNER**

Mitsubishi Electric offers a wide range of automation equipment from PLCs and HMIs to CNC and EDM machines.

## **A NAME TO TRUST**

Since its beginnings in 1870, some 45 companies use the Mitsubishi name, covering a spectrum of finance, commerce and industry.

The Mitsubishi brand name is recognized around the world as a symbol of premium quality.

Mitsubishi Electric Corporation is active in space development, transportation, semi-conductors, energy systems, communications and information processing, audio visual equipment and home electronics, building and energy management and automation systems, and has 237 factories and laboratories worldwide in over 121 countries. This is why you can rely on Mitsubishi Electric automation solution - because we know first hand about the need for reliable, efficient, easy-to-use automation and control in our own factories.

As one of the world's leading companies with a global turnover of over 4 trillion Yen (over \$40 billion), employing over 100,000 people, Mitsubishi Electric has the resource and the commitment to deliver the ultimate in service and support as well as the best products.

Medium voltage: VCB, VCC

Power monitoring, energy management

Compact and Modular Controllers

Inverters, Servos and Motors

Visualisation: HMIs

Numerical Control (NC)

Robots: SCARA, Articulated arm

Processing machines: EDM, Lasers, IDS

Transformers, Air conditioning, Photovoltaic systems
